

# A peace of mind investment.

When you purchase a DVS® Central Vacuum System, you can rest assured knowing that you are buying a product which offers:

- **Robust technology** – that combines with proven engineering to deliver performance and reliability.
- **Extensive warranties** – most central vacuum companies only offer 12-18 month warranties; compare that with the DVS® Central Vacuum System which offers a five year warranty on:
  - the power unit body + electronics
  - the vacuum motor + hose and attachments
  - ducting and inlet valves (if installed by DVS®)These are conditional warranties; please read the Owner's Manual and Installation Instructions.
- **Energy efficient design** – more suction equates to less operating time, improved energy efficiency and, ultimately, to lower electricity usage.
- **Superior after-sales service from a trusted company** – with over 16 years in business and as a Fletcher Building company, you know you can trust DVS® to install and support your Central Vacuum System.
- **The Kiwi connection** – DVS® Central Vacuum Systems are designed and manufactured in NZ for DVS® by VACUUMONE® utilising 25 years of R&D in the NZ market.
- **Added value to your home** – potential home buyers perceive a central vacuum system as adding real value to your home, as much as double your actual investment in the system itself.

A DVS® Central Vacuum System may be the last vacuum cleaner you'll ever need to buy!

## Endura (bagless)

Height: 870mm  
 Diameter: 373mm  
 Dust collection capacity: 30 litres  
 Filtration: Bin with micro-tex® self-cleaning filtration fabric

### MOTOR SIZE

	1040	1050	1060
Maximum floor area (m <sup>2</sup> )	275	375	750
Maximum ducting length (m)	35	55	75
Maximum no. vacuum inlet valves	5	8	12

## Mistral (with bag)

Height: 603mm  
 Diameter: 319mm  
 Dust collection capacity: 22 litres  
 Filtration: Disposable dust bag with secure rubber membrane

### MOTOR SIZE

	1010	1020
Maximum floor area (m <sup>2</sup> )	275	375
Maximum ducting length (m)	35	55
Maximum no. vacuum inlet valves	5	8

Heart of a Healthy Home™

OCTOBER 2009

# The healthier, easier way to vacuum.

DVS® Central Vacuum Systems for better indoor air quality for you and your family.

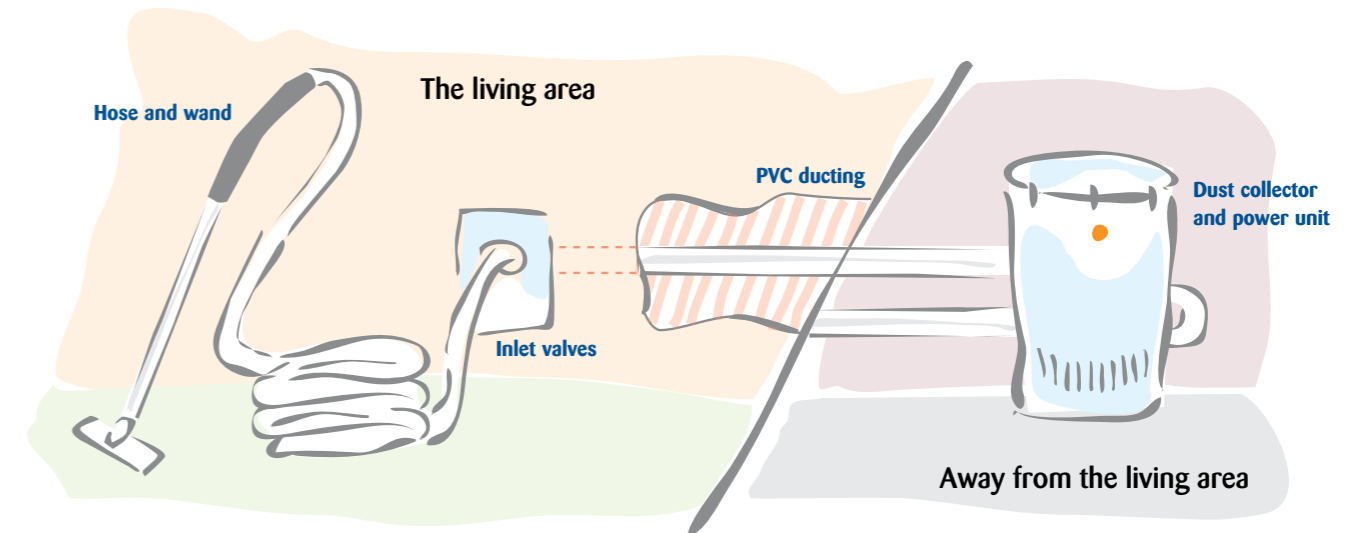

Heart of a Healthy Home™

# The DVS® Central Vacuum System.

## How it works.

### Hose and wand

The lightweight yet sturdy hose (available in two lengths – 9m or 11m) and wand hang neatly away. Then, when it's time to vacuum, you simply connect the hose into one of the inlet valves placed around your home and the vacuum turns on automatically.

### Inlet valves

You can move your central vacuum hose from inlet to inlet and even install an automatic dustpan inlet into rooms with hard floor surfaces so you can sweep debris into it using a regular broom. To calculate the correct number of inlets for your home, either count the number of times you currently change plug sockets while using your portable vacuum, or divide the size of your home by approximately 80m<sup>2</sup>.

### PVC ducting

Each inlet valve connects into an integrated network of 50mm PVC ducting which is ducted out of sight in your home; in new homes the ducting will be located in the walls or under floors or, in existing homes, can easily be run under the floor or in the roofspace. The dirt and debris removed by vacuuming is sent through this ducting to a dust collector.

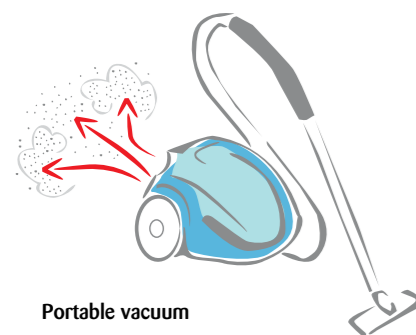

### Dust collector and power unit

These are permanently located well away from the living areas – usually in a garage, basement or separate laundry. The large capacity of the dust bin or bag means it only needs emptying a few times a year. The remote location of the heavy-duty power unit means vacuuming is not as noisy, and therefore less likely to disturb anyone trying to sleep.

As the technology of portable vacuums has evolved, they have in turn become more expensive. As the difference in price between central vacuum systems and portable vacuums has lessened, central vacuum systems have become a more practical and cost-effective solution to cleaning your home. There are several benefits to central vacuum systems:

## Improve your family's health.

Portable vacuums can actually pollute more than they clean because they exhaust dirt, dust and allergens back into the room being cleaned. Why bother vacuuming in the first place?!

Portable vacuum

A DVS® Central Vacuum System, on the other hand, eliminates the re-circulation of dirty air inside your living areas. The allergy-causing dust and debris is extracted through PVC ducting (located in either the walls, roofspace or under floor) to an out-of-the-way dust collector.

The result? A virtually allergen-free living environment which is of huge benefit to people with allergies, asthma and other respiratory illnesses.

Swedish researchers have found central vacuum systems to be so effective at reducing the concentration of dust and other air-borne debris in the home, that Swedish health authorities are considering them as a way to cut their high national health costs. They found it would be less expensive to install a central vacuum in each home in Sweden than to treat the medical problems of those who suffer from dust-related illnesses.\*

## Add value to your home.

Investing in any permanent appliance in your home should help increase the value when you decide to sell. DVS® Central Vacuum Systems can be installed in most existing homes or in homes that are under construction.

## Save time and money.

With motor suction 2 to 3 times more powerful than a conventional vacuum cleaner, the superior performance of a DVS® Central Vacuum System means you'll spend less time vacuuming. And you won't be restricted by a cumbersome, noisy appliance and electrical leads.

The large-capacity dust bag or bin (model dependent) only needs to be changed several times a year, so you'll spend less time emptying it than you would with a portable vacuum cleaner.

A DVS® Central Vacuum System will also save you money by prolonging the life of your carpeting, drapes and furniture through deeper cleaning.

You don't have to wait until you build your dream home to have a healthy, clean living environment; DVS® can install a Central Vacuum System into most existing New Zealand homes.

## The right accessory for every situation.

Other accessories also available. Please contact DVS® for more information.
